

Purya Behzadpur

Senior Software Engineer

✉ puryabzp@gmail.com ☎ +989368115384 📍 Tehran, Iran 🔗 [linkedin.com/in/purya-behzadpur/](https://www.linkedin.com/in/purya-behzadpur/) 🌐 puryabzp.github.io

Data-driven software engineer experienced in building scalable backend architectures, data platforms, and high-throughput pipelines in data-intensive environments. Strong ownership mindset with a focus on reliability, performance, and data quality at scale.

SKILLS

Python | Git | SOLID | FastAPI | Django | Flask | Agile & Scrum Methodologies | Docker | Linux | Pyspark | Bash | Kafka | AirFlow | RabbitMQ | CI/CD | AWS | Redis | Data Engineering | Kubernetes | API Gateways | Azure | GCP | OOP | DDD | BDD | TDD | ETL Processes | Microservices | GraphQL | Pandas | MySQL | MongoDB | Pytest | Grafana | Terraform | PostgreSQL | Elasticsearch | Integration Testing | Machine Learning | Unit Testing | Data Modeling

WORK EXPERIENCE

Senior Software Engineer

Nov 2025 – Present

Karnameh

- Introduced a VoIP-based OTP by Call fallback, reducing call center workload by 50%+ during SMS outages.
- Engineered an ETL pipeline for vehicle market data, restoring Price Estimator accuracy and adoption.
- Refactored the critical payment services, modernizing legacy components and accelerating high-volume transaction flows.
- Partnered to build a vehicle inspection discrepancy detection service, improving valuation accuracy and reducing transaction risk.

Senior Python Engineer, Data Systems

May 2023 – Oct 2025 | Tehran, Iran

Charisma Financial Group

- Devised a portfolio management system combining data engineering, backend development, and machine learning to align investment strategies with clients' financial goals.
- Spearheaded scalable ETL processes to update data sources throughout the day for use by other services and teams using Airflow.
- Designed FastAPI and Plotly Dash dashboards to monitor investment proposal accuracy and prediction efficiency.
- Refactored a large and legacy database with partitioning techniques, boosting query performance by 80%.
- Revamped data processing capabilities to support real-time updates across over 1,000,000 customer profiles.
- Established real-time PostgreSQL-to-Kafka data pipelines for efficient change data capture and streamlined data processing.
- Fostered data processes for over 1400 Tehran Stock Exchange tickers, safeguarding data integrity.
- Performed routine code reviews to uphold code quality, ensure maintainability, and enforce coding standards organization-wide.

Back-end Developer

Feb 2022 – May 2023 | Tehran, Iran

Bithome

- Contributed to a 5-person Agile team that delivered a new backend architecture for a successful product launch.
- Improved endpoint performance by 63% by migrating time-consuming functions to background tasks using Celery and Redis.
- Enhanced performance and extensibility by rebuilding the back-office application with Django, cutting response time by 50%.
- Optimized product quality through extensive test coverage of new features, resulting in a 23% reduction in customer complaints.
- Created a monitoring dashboard with Sentry to improve issue identification and reduce debugging time.
- Resolved speed issues by optimizing database queries, resulting in a 25% faster application speed.

Back-end Developer

Jun 2020 – Feb 2022 | Tehran, Iran

Andisheh Negar Pars

- Implemented an application to manage 1000+ clients as part of the SIEM platform.
- Applied WebSocket protocol for secure and stable client-server communication with AES-128 encryption.
- Adopted Celery and Redis for asynchronous task execution, with Docker and Nginx for deployment.
- Participated in architecting and implementing a microservices-based system, increasing development efficiency by 40%.
- Streamlined the onboarding process by documenting project structure and installation instructions.
- Spearheaded Dockerization of projects, streamlining deployment for enhanced efficiency and reliability.
- Successfully integrated Elasticsearch, Logstash, and ElastAlert to enable real-time log monitoring and anomaly detection.

Software Developer

Nov 2017 – Jun 2020 | Tehran, Iran

PFK

- Played a key role in building and maintaining Java-based camera firmware.
- Engineered a Python-driven software system to manage and support real-time data exchange for camera operations in 28 cities.
- Refined MySQL database queries to enhance data processing speed and overall system efficiency.
- Oversaw server infrastructure and ITS/ETC databases across multiple data centers.

EDUCATION

B.S. Information and Communications Technology
Shamsipour Technical and Vocational College

Sep 2012 – Jan 2017 | Tehran, Iran
