

Purya Behzadpur

Senior Software Engineer

✉ puryabzp@gmail.com ☎ +98 936 811 5384 📍 Tehran, Iran 🔗 [linkedin.com/in/purya-behzadpur/](https://www.linkedin.com/in/purya-behzadpur/)

Senior Software Engineer with 8+ years of experience building Python backends, distributed systems, and data platforms. Built real-time systems supporting 1M+ users, with a strong focus on scalability, reliability, and performance.

SKILLS

- **Backend & Architecture:** Python | FastAPI | Django | REST APIs | GraphQL | Microservices | Distributed Systems | DDD | Celery
- **Data Engineering:** Data Engineering | Data Pipelines | ETL/ELT | Apache Airflow | Apache Kafka | Data Modeling | Data Warehousing | dbt
- **Databases:** SQL | PostgreSQL | MySQL | Redis | ClickHouse | MongoDB | Elasticsearch | Snowflake | BigQuery
- **Cloud, DevOps & Platform:** AWS | Azure | GCP | Docker | Kubernetes | Terraform | CI/CD | Git | Bash | Linux | Monitoring | Grafana | Observability
- **AI & ML:** Machine Learning | ML Pipelines | MLOps | LLM Applications | AI Agents
- **Testing & Delivery:** TDD | BDD | Unit Testing | Integration Testing | Agile | Scrum

WORK EXPERIENCE

Senior Software Engineer 11/2025 – Present | Tehran, Iran
Karnameh

- Engineered 4 Prefect data pipelines to ingest and process data from 10+ sources into ClickHouse and PostgreSQL, restoring the Price Estimator, one of the company's top 3 revenue-generating services.
- Transformed call-center operations by building a FastAPI/Celery/Asterisk service that pre-called customers and connected answered calls to agents, saving 30–60s per call and increasing follow-up capacity by 30–40%.
- Reengineered legacy payment services with DDD and automated 10–15 operations workflows using event-driven actions, enabling the launch of an Auction service handling 3–5 auctions daily.
- Introduced a voice-based OTP fallback for SMS failures, automatically calling users with verification codes and reducing call center workload by 50%+ during internet outages.

Senior Python Engineer, Data Systems 05/2023 – 10/2025 | Tehran, Iran
Charisma Financial Group

- Built a real-time portfolio management platform integrating backend services, data pipelines, and ML workflows, supporting 1M+ users, 8+ teams, and 10+ consuming services, with backend workloads across 5 Kubernetes pods and CI/CD via Azure DevOps.
- Built 20+ reusable dbt staging, intermediate, and mart models with incremental materializations and automated data-quality tests, standardizing analytics datasets consumed across 8+ teams and 10+ downstream services.
- Delivered 7+ Python/Airflow ETL pipelines to continuously refresh data across GraphQL APIs, MongoDB, Redis, relational databases, and Snowflake/BigQuery data warehouses for multiple teams and services.
- Designed FastAPI and Plotly Dash apps to monitor 5+ investment models generating 1,000+ predictions per market session.
- Enabled 40+ services via WSO2 API Gateway, delivered 7+ real-time Kafka pipelines, and continuously refreshed Snowflake and shared databases used across multiple teams.
- Refactored large-scale databases and optimized data models using partitioning and indexing, improving query performance by 80%.
- Established real-time PostgreSQL-to-Kafka CDC pipelines, enabling real-time synchronization and event-driven processing.
- Operationalized data-processing workflows for 1,400+ Tehran Stock Exchange instruments, supporting analytics and data teams.

Backend Engineer 02/2022 – 05/2023 | Tehran, Iran
Bithome

- Helped a 5-person Agile team successfully launch a real-estate crowdfunding platform, attracting investment for 5+ development projects.
- Improved endpoint performance by 60% by moving long-running tasks to asynchronous processing with Celery and Redis.
- Led a full Django back-office rebuild, including frontend delivery, improving workflows and cutting response times by 50%.
- Raised automated test coverage to 90% in GitLab CI/CD, increasing service reliability and reducing customer complaints by 20–50%.
- Optimized database queries and added profiling and monitoring, improving application performance by 25%.

Backend Engineer 06/2020 – 02/2022 | Tehran, Iran
Andisheh Negar Pars

- Implemented a distributed SIEM agent managing 1,000+ nodes with real-time health monitoring, remote command execution, and automated updates over AES-128-encrypted WebSockets using Celery and Redis.
- Co-designed and developed 25+ security microservices, led Dockerization, and set up GCP communication, improving efficiency by 40%.
- Integrated Elasticsearch, Logstash, and ElastAlert into real-time pipelines handling 1,000+ logs/sec for monitoring and anomaly detection.

Software Developer 11/2017 – 06/2020 | Tehran, Iran
PFK

- Developed and maintained Java-based firmware for 1,200+ traffic-monitoring cameras deployed across 28+ cities.
- Architected a Python-based distributed system processing 100+ images/sec across the nationwide camera network.
- Maintained ITS/ETC databases and infrastructure across 4 data centers, supporting reliable distributed traffic operations.

EDUCATION

B.S. Information and Communications Technology 09/2012 – 01/2017 | Tehran, Iran
Shamsipour Technical and Vocational College
