

Purya Behzadpur

Senior Software Engineer

puryabzp@gmail.com • +989368115384 • Tehran, Iran • [linkedin.com/in/purya-behzadpur/](https://www.linkedin.com/in/purya-behzadpur/) • puryabzp.github.io

Software Engineer experienced in designing backend and data systems and distributed applications, using Python and its frameworks, and cloud technologies. Skilled in building software solutions focused on performance, clean architecture, and collaboration.

SKILLS

Python | Git | SOLID | FastAPI | Django | Flask | Agile & Scrum Methodologies | Docker | Linux | Pyspark | Bash | Kafka | AirFlow | RabbitMQ | CI/CD | AWS | Redis | Data Engineering | Kubernetes | API Gateways | Azure | GCP | OOP | DDD | BDD | TDD | ETL Processes | Microservices | GraphQL | Pandas | MySQL | MongoDB | Pytest | Grafana | Terraform | PostgreSQL | Elasticsearch | Integration Testing | Machine Learning | Unit Testing | Data Modeling

WORK EXPERIENCE

Senior Software Engineer

Nov 2025 – Present

Karnameh

- Engineered ETL pipelines that improved Price Estimator accuracy, reviving one of the company's core revenue-generating services
- Reengineered critical payment services, automating manual financial workflows and enabling the launch of the Auction service.
- Automated outbound call routing after customer pickup, reducing agent idle time and doubling inbound call capacity.
- Introduced VoIP-based OTP with call fallback, reducing call center workload by 50%+ during internet outages.
- Co-developed a vehicle inspection discrepancy detection service, reducing inspection errors and improving transaction reliability.

Senior Python Engineer, Data Systems

May 2023 – Oct 2025 | Tehran, Iran

Charisma Financial Group

- Devised a portfolio management system integrating backend, data engineering, and machine learning for investment optimization.
- Spearheaded scalable ETL processes to update data sources throughout the day for use by other services and teams using Airflow.
- Designed FastAPI and Plotly Dash dashboards to monitor investment proposal accuracy and prediction efficiency.
- Refactored a large and legacy database with partitioning techniques, boosting query performance by 80%.
- Revamped data processing capabilities to support real-time updates across over 1,000,000 customer profiles.
- Established real-time PostgreSQL-to-Kafka data pipelines for efficient change data capture and streamlined data processing.
- Fostered data processes for over 1400 Tehran Stock Exchange tickers, safeguarding data integrity.
- Performed routine code reviews to uphold code quality, ensure maintainability, and enforce organization-wide coding standards.

Back-end Developer

Feb 2022 – May 2023 | Tehran, Iran

Bithome

- Contributed to a 5-person Agile team that delivered a new backend architecture for a successful product launch.
- Improved endpoint performance by 63% by migrating time-consuming functions to background tasks using Celery and Redis.
- Enhanced performance and extensibility by rebuilding the back-office application with Django, cutting response time by 50%.
- Optimized product quality through extensive test coverage of new features, resulting in a 23% reduction in customer complaints.
- Created a monitoring dashboard with Sentry to improve issue identification and reduce debugging time.
- Resolved speed issues by optimizing database queries, resulting in a 25% faster application speed.

Back-end Developer

Jun 2020 – Feb 2022 | Tehran, Iran

Andisheh Negar Pars

- Implemented an application to manage 1000+ clients as part of the SIEM platform.
- Applied WebSocket protocol for secure and stable client-server communication with AES-128 encryption.
- Adopted Celery and Redis for asynchronous task execution, with Docker and Nginx for deployment.
- Participated in architecting and implementing a microservices-based system, increasing development efficiency by 40%.
- Streamlined the onboarding process by documenting project structure and installation instructions.
- Spearheaded Dockerization of projects, streamlining deployment for enhanced efficiency and reliability.
- Successfully integrated Elasticsearch, Logstash, and ElastAlert to enable real-time log monitoring and anomaly detection.

Software Developer

Nov 2017 – Jun 2020 | Tehran, Iran

PFK

- Played a key role in building and maintaining Java-based camera firmware.
- Architected and developed a Python-driven system for real-time camera data exchange across 28 cities.
- Refined MySQL database queries to enhance data processing speed and overall system efficiency.
- Oversaw server infrastructure and ITS/ETC databases across multiple data centers.

EDUCATION

B.S. Information and Communications Technology
Shamsipour Technical and Vocational College

Sep 2012 – Jan 2017 | Tehran, Iran
